

Manual BreakOut Session – Box

Risk Warning

The basis of my actions is based on data from my broker. These can differ from other brokers! I assume no liability for your decisions to copy my trading. Generally, trading in leveraged products, currencies, commodities, CFDs, other derivatives, and other products traded on the stock exchange is associated with very high risk, which can lead to a total loss. My calculations are based on historical data, represent possible trading opportunities, and offer no guarantee of success. The same applies to my newsletter. Despite analysis and research, all influences on the market together are decisive for the development of prices and cannot be completely understood by anyone. My analyses, therefore, serve neither as investment advice nor as a recommendation to buy or sell, but rather show opportunities that I use for my actions.

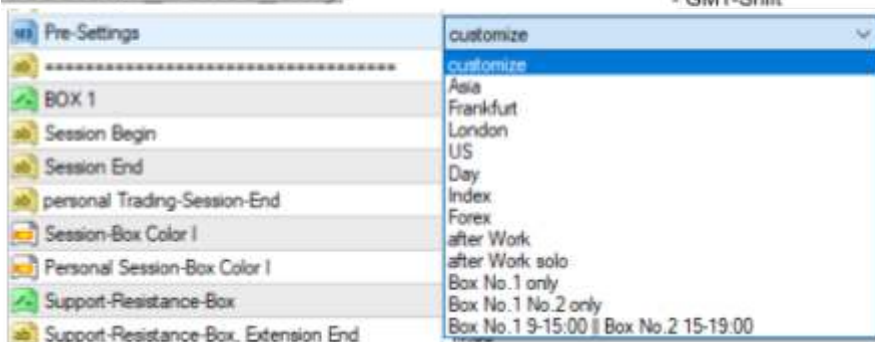

Breakout Box

- opening hours as breakout and forecast for TP- / SL- estimation
- 4 predefined breakout examples: Asia, Frankfurt, London, US
- works best with JPY - pairs, London settings, on M15 - H1
- set up your own favorite opening-boxes

Session-Box

- 5 boxes are individually adjustable and can be activated
- spread displayed as an additional box
- periods adaptable to trading habits
- verify the effectiveness of indicators
- can be used as break-out boxes
- 4 preset session profiles
- 5 preset profiles outbreak
- GMT-Shift

Session - Boxes only:

BOX5 = true;
Session_Begin_d = "00:01";
Session_End_d = "23:59";
personal_Trading_Session_End_d = "23:59";
```

123 GMT Shift

-1

The idea is to catch an ongoing movement after an opening session, for instance, the Asia-Session. The height of the box is equal to TP and SL.

Please watch the trend in higher time-frames, watch support- and resistance- levels; this example is a wonderful example, but there is no guarantee for success, please calculate your risk smart.

- default -Settings
- Bars to process 30
- GMT Shift 2 (check your own broker, it might be different)
- Box1
- Support-Resistance-Box = true
- Support-Resistance-Box, Extension End = 11:59

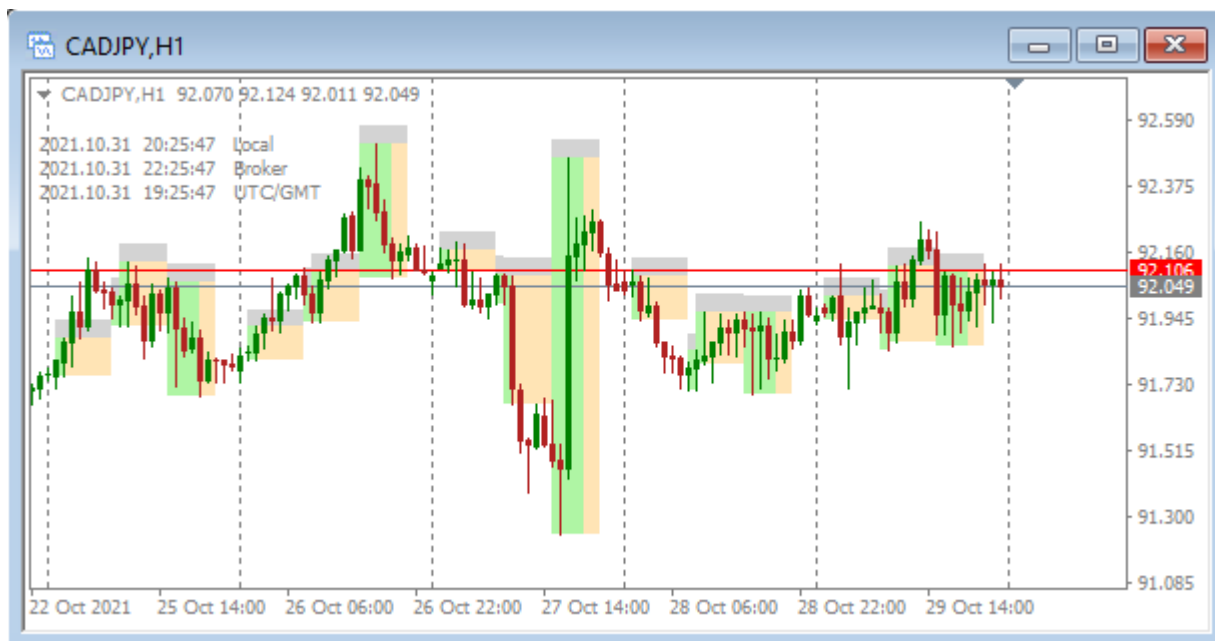

Despite several attempts, I was unable to download the indicator.

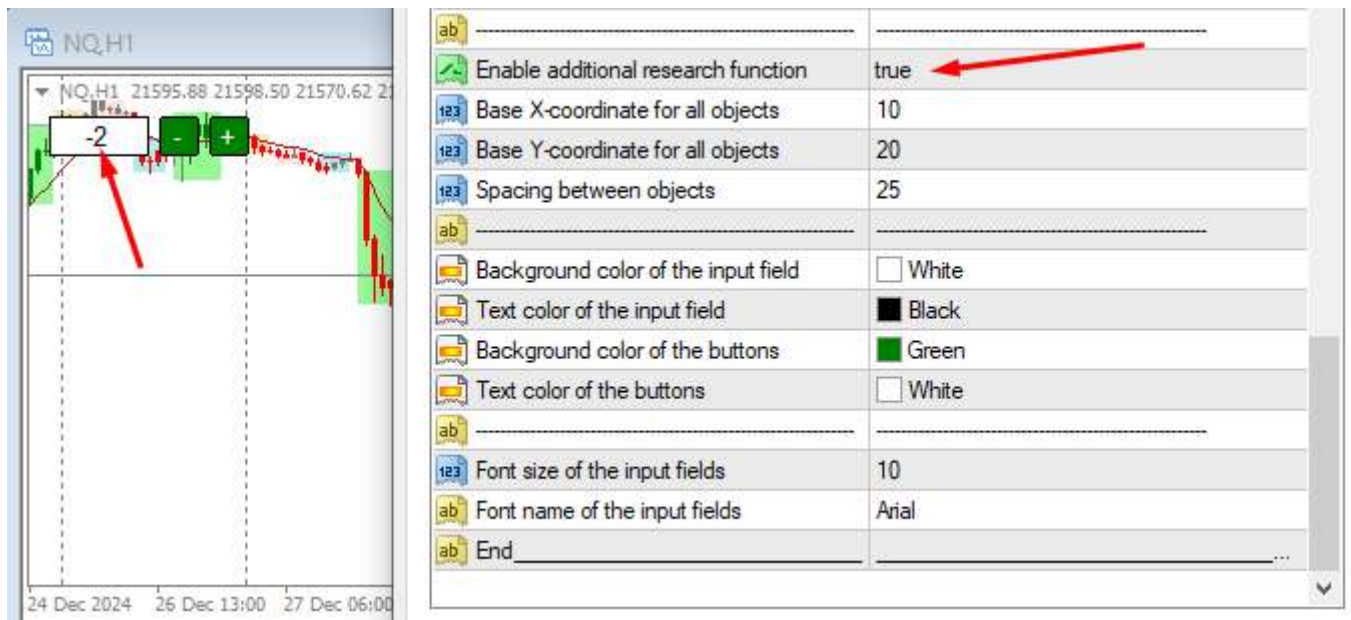

- try the download directly from the terminal -

You don't know your own and your Broker's Timezone?

Time-Zones Local/Broker/UTC shows these 3 different time zones on the chart, top left

Move the boxes to find the optimal breakout setting for an instrument. The input field on the chart is linked to the “GMT Shift” setting.
